STATE-DETERMINED SYSTEMS Fundamental to system dynamics is the interaction between a system and its environment. In the broadest context of system dynamics, a system and its environment are defined as abstract entities: System: A collection of matter, thoughts, or concepts contained within a real or imaginary boundary.

Environment: All that is external to the system. The interaction

Discontinuous Dynamical Systems - arXiv

Discontinuous Dynamical Systems: A tutorial on solutions, nonsmooth analysis, and stability Jorge Cortés January 23, 2009 Discontinuous dynamical systems arise in a large number of applications. In optimal control problems, open-loop bang-bang controllers switch discontinuously between extreme values of the inputs to generate minimum-time trajectories from the initial to the final states [1]
